

# Recycling

## Recycling

A key component to any environmental program is recycling. Many of the items that used to be thrown in the trash can now be recycled, including: paper products, glass and specific types of plastics. Recycling accomplishes two things: it reduces the amount of material going into the waste stream and it also reduces the amount of virgin material required to make new products, since many products today contain some amount of recycled content. Containers can be utilized indoors or outdoors and provide flexible configurations to suit the recycling program requirements. Receptacles with special markings and top openings have been developed to accommodate these needs.

Rubbermaid offers recycling kits that contain universal color coded symbols and word labels that can be used with their line of recycling receptacles. The new line of blue recycling containers have 30% post consumer recycled resin content. Models included in this new offering are: Slim Jim, Brute, Glutton and deskside versions. These receptacles will look like current containers and have the same functionality and durability.

Barclay recycling centers have a gel-coat finish and will not stain or tarnish. White or black decals are available for Barclay receptacles.
