

## Water Saving Devices

Water saving devices such as water free urinals and auto flush devices can drastically reduce water consumption on the production of wastewater. Water free urinals also can help save on water and sewage costs, plumbing and maintenance costs and vandalism related costs. LEED-EB requires a reduction in potable water usage and highly recommends doing so through the use of automatic water control systems or innovative solutions like water free urinals. For more product standard information visit: [www.usgbc.org/leed](http://www.usgbc.org/leed).

Hands-free water faucets and auto-flush devices control the amount of water being discharged and lessen the consumption of potable water. These urinals also require less maintenance, prevent costly water damage caused by
